Please read the following to help achieve the layout:

You may add to the markup only to attach your css. Do not modify anything else with the html file.

The body should use 0.9em and Arial and Helvetica for the font. I would recommend setting backup fonts that you deem appropriate. Set the leading to 17px as well. The color should be #555555.

The main portion of the site is 960px and centered but look closely to see how this is achieved. Some portions of the site span the entire width of the browser.

The left column width is 563px.

The right column width is 245px.

Heading Level One is 18px

Heading Level Two is 14px

Heading Level Three is 12px

Heading Level Four is 10px

Navigation buttons are 12px

Slogan is 10px

Sidebar list items are 14px

Adjust your fonts as needed. Use the above sizes as a gauge for the remaining adjustments. Some of these may need to be overwritten as you progress. I will not be deducting any points if you are off by a pixel or two with the fonts.

Colors can be sampled directly off of the provided comps.

Rename the file to lastname_firstInitial_practical and submit it to the dropbox. Have me verify I received your file.

Good luck and have fun!
